

PRO 7 Compact UV Detector

PRO 7 is designed for simple and convenient verification of banknotes in UV light. Compact size makes it the most common detector in the various ticket offices, where the cashier's desk is extremely small

► FUNCTIONS AND ADVANTAGES

- UV-detection to detect fluorescent security features
- Verification of banknotes from around the world
- Enlarged working space for convenience
- Possibility to verify the banknotes in a set
- Compact size for easy desktop use

PRO 7 is capable of verifying the banknotes of different countries of the world.

The forged banknote printed on a plain paper visibly reflects the UV rays and is easily identifiable under the PRO 7

Banknotes can be verified one by one or in a set

The detector's hood design prevents the dispersion of the UV rays in white light. Detectors of this series can be used in well-lit rooms

PRO 7 is the smallest stationary manual detector of its class. The main advantage of this detector is the possibility to use it in a very limited working place.

► **SPECIFICATION OF PRO 7**

UV lamp power, W	7
Power supply, V/Hz	220/50
Power consumption, W	8
Dimensions, mm	195x190x80
Net weight, kg	1,25
